# Sika® CarboShear® L

Carbon fibre shear links for structural strengthening as part of the Sika® CarboDur® CFRP Strengthening System

## System Description

Sika® CarboShear® L are corrosion resistant carbon fibre shear links, designed for strengthening concrete structures in shear and to anchor Sika® CarboDur® plates at their ends. They are part of the Sika® CarboDur® CFRP Strengthening System.

Sika® CarboShear® L shear links are bonded as external reinforcement using Sikadur®-30 epoxy resin based adhesive for normal, or Sikadur®-30 LP epoxy resin based adhesive for elevated temperatures during application. For fixing into the anchorage holes, Sika AnchorFix®-3+ can also be used.

Refer to the relevant Product Data Sheet for more detailed information about each of these adhesives.

## Uses

Sika® CarboShear® L profiles are used to improve, increase or repair the performance and shear resistance of structures for:

- **Increased Load Carrying Capacity:**
  - Increasing the load capacity of beams.
  - For the installation of heavier machinery.
  - For changes in building use.

- **Damage to structural elements due to:**
  - Deterioration of the original construction materials
  - Steel reinforcement corrosion
  - Accidents (Vehicle impact, earthquakes, fire etc.)

- **Improvement of serviceability and durability:**
  - Reduced deflection and crack width
  - Stress reduction in the steel reinforcement
  - Improved fatigue resistance

- **Change of the structural system:**
  - Removal of walls and / or columns
  - Removal of floor and wall sections to create access / openings
  - Changed design philosophy

- **To repair design or construction defects such as:**
  - Insufficient / inadequate reinforcement
  - Insufficient / inadequate structural depth

## Characteristics / Advantages

- Tested anchorage system.
- Non corroding
- Very high strength and durability
- Shear and bursting enhancement.
Well defined anchoring.
Lightweight.
Low overall thickness can be over coated.
Easy transportation.
Easy installation – no heavy handling and installation equipment.
Outstanding fatigue resistance.
Minimal preparation of the shear links is required.
Minimal aesthetic impact.

Tests

Approval / Standards

Poland: Technical Approval IBDiM Nr AT/2008-03-0336/1 „Płaskowniki, pręty, kształtki i maty kompozytowe do wzmacniania betonu o nazwie handlowej: Zestaw materiałów Sika CarboDur® do wzmacniania konstrukcji obiektów mostowych (Polish)

EMPA Test Report 116/7: Shear strengthening with prefabricated CFRP L-shaped plates, Test beams S1 to S6, Swiss Federal Laboratories for Materials Testing and Research EMPA, 2002

Product Data

Sika® CarboShear L shear links

Form

Appearance / Colour
Carbon fibre reinforced polymer with an epoxy matrix, black.

Packaging
Packs of 20 links, or individual pieces

Types

<table>

The leg length can be cut to size (by saw, or preferably by diamond cutting disk).
The inner radius of the bend zone is 25 mm for all sizes

Storage

Storage Conditions / Shelf Life
Unlimited, provided there is no exposure to direct sunlight (UV light), in dry conditions and at temperatures of max. 50°C
Transportation: only in the original packaging, or otherwise adequately protected against any mechanical damage

Technical Data

Density
1.55 g/cm³

Glass Transition Temperature
> 80°C (according to EN 61006)

Fibre Volume Content
> 56%

Design

For design details, please refer to the separate documentation provided: “Technical Documentation Sika® CarboShear – Design and Calculation for Shear Strengthening” Ref: 870 41 02

System Information

Sika® CarboShear® L & Sikadur®-30

Application Details

Consumption

Please refer to the “Technical Information Manual Sika® CarboShear® Externally Bonded Shear Reinforcement” Ref: 850 41 06

Substrate Quality

Recommended minimum concrete pull-off strength after surface preparation
- Mean: 2.0 N/mm²
- Minimum: 1.5 N/mm²

The effective concrete pull-off strength after surface preparation has to be checked and confirmed

When the concrete pull-off strength is below the stated minimum requirements, alternative Sika® strengthening solutions are available: Please refer to the Product Data Sheet for SikaWrap® fabrics

Concrete must generally be older than 28 days (dependent on curing conditions and the type of concrete etc.)

Substrate Preparation

Refer to the “Technical Information Manual Sika® CarboShear® Externally Bonded Shear Reinforcement” Ref: 850 41 06

Application Conditions / Limitations

Application Conditions / Limitations

Refer to the relevant Sika® epoxy adhesive Product Data Sheet for:
- Sikadur®-30

Application Instructions

Application Method / Tools

Refer to the relevant Product Data Sheet for:
- Sikadur®-30

Refer to the “Technical Information Manual Sika® CarboShear® Externally Bonded Shear Reinforcement” Ref: 850 41 06

Notes on Application / Limitations

A suitably qualified Structural Engineer must be responsible for the design of the strengthening works.

Additionally as this application is structural, great care must also be taken in selecting suitably experienced and trained specialist contractors.

Sika CarboShear® strengthening systems with Sika® CarboShear® L profiles must be protected from permanent exposure to direct sunlight, moisture and/or water. Refer to the relevant Technical Information Manual and Product Data Sheets for the selection of suitable over coating materials in situations where systems will be fully or partially exposed.
Maximum permissible continuous service temperature is approx. +50°C.

Note: When using the Sika® CarboHeater® for curing Sikadur®-30 LP to be used at elevated temperatures, the maximum continuous service temperature can be increased to +80°C. Please refer to the Sika® CarboHeater Product Data Sheet for further information.

Please also refer to the “Method Statement Sika® CarboShear® Externally Bonded Shear Reinforcement” Ref: 850 41 06 for further limitations and guidelines.

Detailed advice can always be obtained from Sika Technical Services Department.
